ABSTRACT

Asnidar. (2020). Profiling the vocabulary of English coursebooks used in ELT for non-English majors at an Islamic Institute in Manado: Corpus-Based Studies. A thesis. English Department Faculty of Tarbiyah and Teacher Training, State Islamic of Institute Manado. Advisor; Dr. Srifani Simbuka, M.Educ., Stud., M.Hum, and Dr. Andi Mukarramah Nagauleng., S.S., M.Pd.

This research investigates the vocabulary profile (vocabulary category based on Nation 2001) of English Coursebooks used in ELT for non-English majors at state institute of Islamic studies (IAIN) Manado. The research aims to show the vocabulary coverage and word-types based on 3 of 4 of Nation's (2001) vocabulary category, i.e., the High-Frequency words, Academic words, and Low-Frequency words. The research adopted a quantitative descriptive design that uses corpus as the only data, and this design has been familiar with corpus approach studies. The data were obtained from 3-English course books; 'Business English' and 'Economic English' in which the books were used in similar faculty (Faculty of Economics and Islamic Business) and 'Person to person' book which used in 4-Faculties, i.e., Faculty of Tarbiyah, Faculty of Ushuluddin, Faculty of Sharia, and Faculty of Economic and Islamic Business. The researcher employed a corpus tool, namely AntWordProfiler by Laurence Anthony, to produce statistical vocabulary and frequency information concerning the course books.

The findings show that three-course books have an average of 63,130 tokens and 5,290 word-types. The course books covered 87.76% tokens and 55.16% word-types that indicate as High-frequency Words. It is considered that the proportion of High-frequency words in the 3-English course books in this study is average. In terms of the Academic Words, the coverage is 6.17%, which below the current trend. However, it still confirmed the "suggested" content as long as it is not as high as the High-Frequency words. The Low-Frequency Words coverage is 6.07%, which exceeds the standard of the coverage mentioned by Nation (2001).

Key Words: corpus, vocabulary, coursebook.

ABSTRAK

Asnidar (2020) Menggambarkan kosakata pada buku pelajaran bahasa Inggris yang digunakan dalam pengajaran Bahasa Inggris pada jurusan non-bahasa Inggris di Institut Agama Islam Negeri Manado: Studi berbasis korpus. Skripsi. Jurusan Tadris Bahasa Inggris Fakultas Tarbiyah dan Ilmu Keguruan, Institut Agama Islam Negeri Manado. Pembimbing; Dr. Srifani Simbuka, M.EducStud., M.Hum dan Dr. Andi Mukarramah Nagauleng., S.S., M.Pd.

Penelitian ini meneliti tentang gambaran kosakata (kategori kosa kata yang disarankan Nation 2001) pada buku pelajaran Bahasa Inggris yang digunakan dalam pengajaran Bahasa Inggris "ELT" pada jurusan non-Bahasa Inggris di Institut Agama Islam Negeri Manado. Penelitian ini bertujuan untuk mengungkapkan cakupan (persentase token) kosakata dan tipe kata berdasarkan 3 dari 4 kategori kosakata Nation (2001) yaitu, Kata-kata Frekuensi Tinggi, Kata-kata Akademik, dan Kata-kata Frekuensi Rendah. Penelitian ini menggunakan desain deskriptif kuantitatif dengan menggunakan korpus sebagai satu-satunya data dan tentunya desain ini tidak asing lagi pada studi pendekatan korpus. Pada penelitian ini, data diperoleh dari 3 buku; Buku *'Business English'* dan '*Economic English'* yang keduanya digunakan di fakultas yang sama (Fakultas Ekonomi dan Bisnis Islam) dan buku 'Person to person' digunakan di 4-Fakultas yaitu; Fakultas Tarbiyah, Fakultas Ushuluddin, Fakultas Syariah dan Fakultas Ekonomi dan Bisnis Islam. Peneliti menggunakan alat korpus yaitu AntWordProfiler karya Laurence Anthony sebagai instrumen dalam menginformasikan kosa kata statistik dan frekuensi terkait pada buku pelajaran Bahasa Inggris.

Penemuan dari penelitian ini menunjukkan bahwa, ketiga buku memiliki 63.130 token, dan 5.290 tipe kata. Buku tersebut mencakup 87,76% token dan 55,16% jenis kata yang diindikasikan sebagai Kata Frekuensi Tinggi. Proporsi kata-kata frekuensi tinggi dalam buku tersebut dianggap normal. Berkenaan dengan Kata-kata Akademik cakupannya adalah 6,17% token, cakupan tersebut berada di bawah tren saat ini. Namun, cakupan tersebut tetap "disarankan" selama cakupannya tidak melebihi dari kata-kata Frekuensi Tinggi. Cakupan Kata Frekuensi Rendah yaitu 6,07% token melebihi standar cakupan yang disebutkan oleh Nation (2001).

Kata Kunci: Korpus, Kosakata, Buku-Buku Pengajaran.

ACKNOWLEDGMENT

Assalamu'alaikum Wr. Wb

Alhamdulillahiroobil' alamiin. Praise be to Allah, the Almighty God of all the worlds, the wisest of all abundance of grace and blessing. Praise and gratitude be to Allah SWT for giving strength and guidance to the researcher so that this thesis can be finished. *Shalawat* and greetings hopefully bestowed on our Great Prophet Muhammad SAW, to his family, friends, and all his followers.

This thesis is titled "Profiling the vocabulary of English coursebooks used in ELT for non-English majors at Manado State Islamic Institute: Corpus-based studies." It is presented to the English Education Department of Tarbiyah and Teacher Training as a compulsory fulfillment of the requirement for strata I degree. The completion of this research would not be achieved without the support and encouragement of many people.

Additionally, the researcher is grateful to the following, for their supports and helps,

1. Delmus Puneri Salim, S.Ag., M.A., M.Res., P.hD as the Rector of Manado State Islamic Institute.

2. Dr. Ahmad Rajafi, M.Hi as the first Deputy Rector of Manado State Islamic Institute.

3. Dr. Radliyah Hasan Jan, S.E., M.Si, as the second Deputy Rector of Manado State Islamic Institute.

4. Dr. Musdalifah Dachrud, S.Ag., S.Psi., M.Si., M.Psi as the third Deputy Rector of Manado State Islamic Institute.

5. Dr. Ardianto, M.Pd as the Dean of Tarbiyah and Teacher Training Faculty Manado State Islamic Institute.

6. Dr. Adri Lundeto, M.Pd.I as the first Deputy Dean of Tarbiyah and Teacher Training Faculty Manado State Islamic Institute.

7. Dr. Feiby Ismail, M.Pd as the third Deputy Dean of Tarbiyah and Teacher Training Faculty Manado State Islamic Institute.

8. Nur Halimah, M.Hum as the Head of English Education Department.

9. Dr. Srifani Simbuka, M. Educ., Stud., M.Hum as my first advisor who gave me suggestions, corrections and also her guidance and Dr. Andi Mukarramah Nagauleng., S.S., M. Pd as my second advisor for support, corrections, motivation, and advice.

10. All English Education Department lecturers for giving precious knowledge.

11. The researcher's parents Hasanuddin and Wahida, always give the strength, prayer, and support to finish the study.

12. All of the researcher's beloved friends, especially TBI's 16 family.

The researcher realized the thesis is far from being perfect, and hopefully, the thesis can provide benefits and input for readers

Manado, 19 November 2020

CHAPTER I

INTRODUCTION

A. Research Background

Vocabulary is an element in the teaching and learning of English as a foreign language. Schmitt (2000:55) as cited in Alqohtani (2015:22) emphasizes that "*lexical knowledge is central to communicative competence and to the acquisition of a second language*". Nation (2001) further describes "*the relationship between vocabulary knowledge and language use as complementary: knowledge of vocabulary enables language use and, conversely, language use leads to an increase in vocabulary knowledge*". Besides, Astika (2014:124) "*With sufficient vocabulary knowledge, learners will be able to access knowledge, express ideas, communicate, and learn new concepts*". It implies, vocabulary is the key element to gain knowledge since with large vocabulary learners can recognize ideas and concepts they learn more effectively and also learners will know all about the message as their achievement in their learning language by learning the vocabulary as the basic part. In short, vocabulary knowledge is the best tool to determine the learners' achievement in learning a language (White, Graves, and Slated (1990) as cited in Wessels, 2011).

Vocabulary learning is needed by students since students might be encountered an unfamiliar word either in books or classrooms. As Sudarman (2018:21) said that vocabulary learning is central to language teaching and is of paramount importance to a language learner. Based on this opinion about the

importance of vocabulary, the researcher concluded that the importance of vocabulary is the same as the importance of ELT material taught by lecturers in class.

In the teaching and learning process, basically, ELT material is provided by lecturers as a basis for students and language practice in the class, both material sourced from books or that can be accessed via the internet. In this case, the role of vocabulary for material that is the vocabulary list can help educators provide English material that investigates students' vocabulary need to trough out corpus data. As cited in Simbuka (2019) "*Corpus linguistics has also overtly or covertly informed syllabus development (known as the lexical syllabus) and ELT materials*". One of the ways to check the words and their recycling in the materials is by comparing the vocabulary with the English corpus suggested by Nation 2001 (GSL & AWL) (Herdian, 2017).

Allah SWT said in his word:

$$\text{اَلشَّمْسُ وَالْقَمَرُ بِحُسْبَانٍ}$$

Translate:

The sun and the moon follow their measured out calculation (Q.S: Ar-Rahman: 5)

According to the interpretation of the Ministry of Religion of that verse is "*Allah says that the sun and the moon, which are among the largest celestial bodies, circulate in their respective orbits, the sun and the moon, which are very*

*certain, because of this there will be changes in the seasons. By taking these changes into account humans can regulate agriculture, trade, **education**, and so on*". Based on the interpretation, it implies that everything in the entire universe Allah has already arranged its occurrence, and Allah's knowledge covers all about things. The sun and the moon have been measured by Allah for their size, position, and rotation so that night and day events occur. Allah has provided people with a night to rest and days to work. This means that Allah provides an easy way for humans to regulate their activities. If we examine the meaning of this verse, it has similarities with the purpose of this study, that is calculating the vocabulary contained in the textbook so that the lecturer can measure the suitability of the vocabulary to be studied by students in order to achieve success in the teaching and learning process.

Vocabulary expansion is significant for learners in an EFL environment such as that in Indonesian universities. Students are required to learn and master English actively not only have to pass the course but also as a form of mastery of the English language they are learning, and one of the sources of vocabulary learning comes from coursebooks as confirms by O'Loughlin (2012) cited in Timothy Ralph Woodhouse (2013) that "*the use of course books for vocabulary acquisition necessitates supplementary sources of suitable reading input in order for effective vocabulary learning strategies to be implemented so that learners obtain regular opportunities to meet the most frequent 2,000 words of English*". In vocabulary learning, the number of vocabularies that learners' required to master, affects the learners' level of language learning. University students need at least

3,000 words families to understand a reading (Laufer, 1992 cited in Nation, 2000). Schmitt (2000) as cited in Astika (2015:124) "*students at early stages should learn about 1,000-2,000 high-frequency words and then increase to about 2,000-3,000 words families necessary to read authentic text that may include academic words for reading the material at the university level*". It is clearly seen that vocabulary takes an important role in studying English, particularly for university students.

Related to the number of vocabulary that students must master, and also seeing on O'Loughlin (2012) statement about the importance of coursebooks that also contributed to the acquisition of students' English vocabulary, the researcher then interested to investigate and reveal the vocabulary of English coursebooks used at Manado State Islamic Institute. This study aims to ascertain whether all books have included the vocabulary as described above. This study did not attempt to judge of course books quality, no more than to find the vocabulary coverage used in the course books. It was a great opportunity for researcher investigated and revealed the vocabulary existed in learner's English coursebooks because that at Manado State Islamic Institute no one has conducted the vocabulary profiles on students course books, especially in the Faculty of Economics and Islamic Business, Faculty of Tarbiyah, and Faculty of Ushuluddin.

Farjami (2014) cited in Putri (2016) said "*vocabulary profile gives information about the frequency of function and content words*". Vocabulary profile is effective to help learners choose the appropriate vocabulary in the learning process. Morris and Cobb (2004) stated, "*...to measure the potential*

offered by Vocabprofiler for use in second language teaching trainee assessment." Furthermore, "*vocabulary profiles proved to be useful in carrying out a finer assessment of the language skills of high proficiency non-native speakers than oral interviews can offer*". The Researcher hopes that by looking at the vocabulary profile in the coursebooks, the lecturer can choose the appropriate vocabulary for students.

Vocabulary profile is needed for teachers and learners because both teachers and learners have mutual support in the interaction and communication in the teaching-learning process (Putri, 2016). The researcher considers that investigating the vocabulary profile of English coursebooks for non-English majors is important since both lecturers and students must understand the level of vocabulary suitable for students. According to Capel (2012), "*vocabulary profile is needed because it is a reference source for teachers that provide a fully searchable listing of words*". Based on those statements on vocabulary profile, the researcher has investigated the vocabulary profile of books used at Manado State Islamic Institute.

B. Research Question

This study aims to address the main research question: What is the vocabulary profile of English Coursebooks used in ELT for non-English majors at Manado State Islamic Institute?

This question is further investigated through the following sub-questions.

Sub-question 1: What are the word types in each of the categories of vocabulary as stated by Nation (2001) contained in the investigated English Coursebooks?

Sub-question 2: How many are the tokens of each of the categories of vocabulary as stated by Nation (2001)?

C. Research Objectives

Based on the research question above, the objectives of this study is to expose the vocabulary in terms of the word types and tokens of High-Frequency words, Academic words, and Low-Frequency words contain in English coursebooks used in ELT for non-English majors.

D. Limitation of The Study

Limitations in this research that are;

1. The researcher only focuses on 3 of 4 types of vocabulary as suggested by Nation (2001) namely High-frequency words, Academic words, and Low-frequency words. In this case, the researcher did not describe the Technical vocabulary (the fourth category of vocabulary in Nation's classification 2001) because it requires different software to analyze and determine the technical vocabulary (see Simbuka, et. all 2019 Teflin)

2. There were 3-coursebooks had been selected as corpus data. Two books used in the Faculty of Economics and Islamic Business and one book used in 4-Faculty at Manado State Islamic Institute; Faculty of Tarbiyah, Faculty of

Ushuluddin, Faculty of Sharia and Faculty of Economic and Islamic Business. Those books are most often used by lecturers.

E. Significant of The Study

Based on the research objectives to be achieved, this research is expected to have benefits in education both directly and indirectly. The benefits of this research are as follows:

1. Theoretically

The characteristics of vocabulary coverage, range, and frequency represented in the coursebooks will show in the result of this study. Indeed, it would become an essential factor in ESL/EFL learning, especially in student vocabulary acquisition.

2. Practically

The findings of this research will be beneficial for lecturer. Lecturers can consider several aspects before choosing a coursebook for students based on student's vocabulary needs. Lecturers can prepare the words that are needed to be taught to the students.

Mastering the most important word frequencies such as High-Frequency Words & Academic Words contained in English coursebooks will help students understand properly the content of the text in the coursebooks. Also the advantage of studying words based on their frequency is that by studying the words with a higher frequency students will get a better understanding if

students know the most frequently used words in the language. So, students get the greatest benefit from learning the frequent words first.

The result of this study also will help future researchers who have the same research objectives, in terms of exposing the vocabulary profile of coursebooks. The coverage (the percentage of total words occurs in a text) of vocabulary category i.e. High-Frequency Words, Academic Words, and Low-Frequency Words can be used as a comparison of the research findings.

F. Definition of Key Terms

1. Vocabulary

Hatch and Brown (1995:1) define that vocabulary as a list of words for a particular language or a list or set of word that individual speakers of language might use and vocabulary is the only system involved of alphabetical order".

2. Coursebook

As cited in Triyanto (2016:5) "*Coursebook is a book that is designed carefully for classroom usage and it is prepared by experts to support teaching learning process*" (Bacon, 1935 as cited in Tarigan, 1986:11).

3. Corpus

According to Sinclair (1991); Stubbs (1996); Biber et al. (998); Hunston (2002) cited in Lynne Flowerdew (2012:03) all view a corpus as a collection of authentic language, either written or spoken, which has been compiled for a particular purpose, with a systematic and principled method of data collection and stored in computers.

CHAPTER II

REVIEW OF RELATED LITERATURE

A. The Concept of Word and Vocabulary

The concept of word and vocabulary are important to discuss since people might confuse what is vocabulary and how word and vocabulary differ. For word, Carter defined a word in 3 statements. The first, a word is an orthographic definition (Carter, 1998:4). It means that the definition deals with letters and spelling. The second, a word is the minimum unit of language (1998:5). The third, a word is related to its pronunciation. For vocabulary, Nunan (1999) defined vocabulary as target language words presented in a list. It implies that vocabulary is a collection of words. According to the definition both of word and vocabulary, it is clear the difference between word and vocabulary. A word can be stand alone as a word, however, vocabulary must include more than one word.

B. The Importance of Vocabulary Learning

The importance of vocabulary learning has been widely recognized. "*Knowledge of words is used to access background knowledge, express ideas and communicate with people*" (Sedita, 2005, in Astika 2015:124). Laufer (1997:54) cited in Indraswari (2018:25) "*Vocabulary learning is at the heart of language learning and language use*". Clearly, in the absence of vocabularies, for learners is hard to understand and express their ideas.

The need and importance of learning vocabulary for EFL learners have been analyzed by some experts. Matsuoka and Hirsh (2010) as cited in Iwan (2016)

said "*It is required to get 95% of recognizable words to make the learning process occur*". Furthermore, Schmitt, Jiang, and Grabe (2011) added that "*vocabulary words that are needed to understand by the EFL learners in written texts are around 95% to 98%*". Vocabulary also becomes the first basic thing that needs to be learned by EFL learners in any field. According to Richard and Renandya (2002), "*vocabulary becomes the basic component of language proficiency. It also becomes the basic learning for the learners in speaking, listening, reading, and interacting with others*". Then with learning vocabulary, learners will be able to achieve the other skills in English learning. The more complex vocabulary that is mastered, the higher level of English that learners have. White, Graves, and Slated (1990, as cited in Wessels, 2011) said: "*the learners' level in learning a language can be measured best by using their vocabulary knowledge*".

C. Vocabulary Knowledge

Vocabulary knowledge is known as the knowledge of the word (Nation, 1990, 2001; Laufer et al., 2004; Milton 2009 cited in Maskor, 2016). Also, Jordan (1997) said, "*It is reasonable that vocabulary is related to all language learning and learners usually want to increase their store of vocabulary, regarding it as a measure of their language improvement*". It means that vocabulary knowledge is important for EFL learners to evaluate their progress in learning the language.

Many experts have a different point of view regarding vocabulary knowledge. In order to get a clearer description of vocabulary knowledge, the following subsection presents the discussion of ideas given by different experts.

1. **Breadth and Depth of Vocabulary Knowledge**

A concept of "breadth of vocabulary knowledge" refers to the learners' size of the vocabulary. Shen (2008) "*Vocabulary breadth refers to the number of words the meaning of which a learner has at least some superficial knowledge. It* means that the greater vocabulary is known by learners, the easier for them to understand the text they read or listen to. Despite that, not all of the words have the same meaning, they depend on the context given. Learners need a proper understanding of the words. As Nation and Waring (1997) in Schmitt and McCarthy, 1997:6 cited in Herdian, 2017) said "*It should not be supposed that if a learner has adequate vocabulary then all aspect in language learning becomes easy and it should not also be thought that significant vocabulary knowledge is always a prerequisite to language skill performance*". The statement pointed to the "Depth of vocabulary knowledge" which refers to the quality of vocabulary knowledge. As also said by Shen (2008) *Depth of vocabulary knowledge is defined as a learner's level knowledge of various aspects of a given word, or how well the learner knows a word*". The depth of vocabulary means to which the word is understood by learners including pronunciation, meaning, spelling, and frequency. To sum up, vocabulary knowledge (breadth and depth) determines the student's ability to understand both spoken and written texts.

2. **Receptive and Productive of Vocabulary Knowledge**

According to Laufer and Paribakht (1998) "*Receptive and productive of knowledge of vocabulary mainly deals with how well the learner can access and*

use a word". Receptive vocabulary is mostly related to two skills, namely, listening and reading (Herdian, 2017). Vocabulary or words we recognize when we see or hear them, usually in listening and reading. The process of understanding occurs in the mind or that receptive vocabulary cannot be produced correctly but understood through reading and listening activity.

In contrast, speaking and writing are referred to as productive vocabulary. According to Gairns and Redman (1986) stated that productive vocabulary to be language items that the learner can recall and used appropriately in speech and writing (cited in Kaloso, 2019:7). In speaking, speakers usually convey messages to the listener. It means that speakers have produced a language. In the same way of writing, writers try to tell their ideas to the reader. Hence, written language is produced as a means of conveying ideas.

Nation (1990) argues that the receptive dimension of vocabulary knowledge entails (1) being able to recognize it when it is heard or when it is seen. (2) having an expectation of what grammatical pattern the words will occur in, (3) having some expectation of the words which will collocate with it, (4) knowing its frequency and appropriateness, (5) being able to recall its meaning, (6) being able to make different associations with other related words (Nation, 1990:31-35 as cited in Herdian, 2017).

D. The counting units of vocabulary

This section tells about the concept of vocabulary recycling, which involves frequency. Types and tokens are the important terms in profiling words based on their frequency, since those terms inform what be counted as a word.

1. Tokens

According to Nation and Meara (2002), "*a token or running word is the main term if we are going to count how long a coursebook is"*. They define token as all of the words that occur in the coursebook. For example, the sentence "*I love you more than you love me*" contains eight tokens. Even though the words (love and you) appear 2 times, the occurrences are still counted. Each occurrences of a word is counted as 1 token, therefore the word" love" that occurs 2 times is counted as 2 tokens

2. Types

While in counting word-types, one word form is counted as one type even though the occurrence of the word is more than one time. As suggested by Nation (2001:10) "*When we see the same word occur again, we do not count it again*". For instance, "I love you more than you love me" contains six word-types. The words (love and you) appear 2 times respectively, the appearances are not counted as 2 word-types, but is counted as 1 word-type.

To sum up, the term "token" refers to the total number of words in a text. While the term "type" refers to the number of distinct words in a text.

Therefore in the sentence I love you more than you love me there are 8 tokens but only 6 word types i.e I, Love, You, More, Than, Me.

E. Vocabulary of University learners

In the vocabulary of English, there are more than one hundred thousand vocabularies. According to Merriam Webster's Collegiate Dictionary (2003), there

are 165,000 vocabularies in its repository. Of this large number, basically, not all of the vocabulary had been mastered by most first and second language learners. The number of vocabularies that learners' required to master, affects the learners' level of language learning. Schmitt (2000) cited in Astika (2015:124) "*students at early stages should learn about 1,000-2,000 high-frequency words and then increase to about 3,000-3,000 words families necessary to read authentic text that may include academic words for reading the material at the university level*". In addition, Hirsch (2003) cited in Astika (2015), "*the learner needs to know about 90-95% of the words in a text in order to comprehend it.*" However, this statement does not like as might be expected. Sadarman (2018) found several studies have been conducted in Indonesia to determine the number of vocabulary possessed by Indonesian students in general, such as Quinn (1968), Nurweni and Read (1999), and Nurhemida (2007). However, only a few data are published for specific students, particularly those in the English education department. The first study was carried out by Kweldju (1997). The research measured the vocabulary size of students from 15 teaching colleges in the English Department. The data showed that the participants had only 4,664-word types or 2,800-word communities. The second study was conducted by Kurniawan (2017) to determine the size of the vocabulary possessed by students with a major in English education. The results of the study showed that, on average, the students had 1,400 words. The findings of the two studies showed that the vocabulary of English department students was still below the level indicated by vocabulary scholars. It may also mean that it is difficult for students to practice English

efficiently in order to cope with their everyday learning and communication tasks. The results of the study may also reflect the fact that students have a low level of English proficiency.

F.   Word Frequency

In this study, word frequency refers to how many times a word occurs in the coursebooks. In another word, we call it frequency. Nation (1983) and Waring (1997) as cited in Herdian (2017) said *"most frequency count is based on a sample of text with at least one million words. Frequency itself has its own purpose. It provides a rational basis for learners' vocabulary learning. Frequency information provides a rational basis for making sure that the learners get the best return for their vocabulary learning effort by ensuring that words studied will be met often".* Thus, knowing the frequent words in the coursebooks is important for the lecturer to ensure the vocabulary useful for learners.

Nation (2001) classified vocabulary into four groups based on their frequency of occurrence in texts as described below

1.   High Frequency Words

Nation (2001:15) as cited in Simbuka (2019) *"High-Frequency Words (HFW) occurs the most frequently in any text in any language"*. HFW contains mostly function words (an article and preposition) and content words. There are around 2000 word families included in this type of High-Frequency Words according to Michael West's (1953) General Service List (GSL) (Nation 2001:11). They cover about 80% of the running words in most written

texts and 90% of the running words in a spoken text (Nation, 2008 cited in Sudarman, 2018).

2. **Academic Words**

Academic vocabulary is a list of words created by Avril Coxhead (1998) which refers to a list of words most often appearing in specialized discourse / specialized text (Simbuka, 2019:36). There are 570-word families that do not include words in the GSL. This means, it occurs very frequently in the academic text but it is not from both of the GSL first and second 1000. The academic word covers around 8.5% to 10 % of running words in an academic text (Nation, 2008). It implied that there will be one word in every ten words coming from the AWL. Coxhead 2000 (cited in Alemi 2013) has created the Academic Word List (AWL) by compiling an academic corpus from four disciplines: Law, Arts, Commerce, and Science. The academic words are very important for those who are using academic study like in universities, vocational institutes, or in schools. Thus, Nation (2008) suggest that the university students that use English for their academic tasks should focus on learning this vocabulary once they have mastered the high-frequency words.

3. **Technical Words**

Technical words are words that have specific meanings in informational text, such as science, mathematics, or social studies books. Each discipline has its own term or technical words. As cited in simbuka, (2019: 36) ".....the items of specific technical word list varied from one discipline, interest or

specialization, to another". For example, the words compiled for Applied Linguistics such as '*Lemma*', '*Hapax legonema'* (Nation, 2001:136).

4. **Low Frequency Words**

   Low-Frequency Words (LFW) is a vocabulary that includes all the words that are not high-frequency words, not academic words, and not technical words for a particular subject (Nation 2001). It depends on the text or genre types of a particular discipline. Everyone has their own Low-Frequency Word. For some people, several of the low-frequency words are more technical words. As cited in Simbuka (2019:38) *"One person's technical vocabulary is another person's low-frequency word (Nation, 2001:29)"*. Low-frequency word is usually included in words from foreign languages and names for a particular person, place, or thing. However, except for certain genres such as fiction texts, names of people who are the main characters in a novel will often appear throughout the novel (Simbuka, 2019).

G. **Corpus Linguistics**

1. **Definition of Corpus Linguistics**

   Corpus linguistics is one methods of analyzing language as part of the numerous branches of applied linguistics (Anthony, 2013). As an approach, Corpus Linguistics analyses are based on empirical large scale data (McEnery & Hardie, 2010) as cited in Simbuka (2019:13). Several studies of corpus linguistics use computer software to analysis very large amounts of text. As Anthony (2017) said "*Most studies in the field rely on computer software for the quantitative*

*analysis of linguistic features in very large corpora, comprising thousands, millions, and sometimes billions of word*s."

As method, corpus linguistics affirmed as *"... not a branch of linguistics, nor a linguistic theory, but a methodology, one of the possible way of 'doing' linguistics*" (Mcenery & Gabrielatos, 2006, p.34 cited in Simbuka 2019). Simbuka summarized that there are three characteristics of corpus analysis as method.

1. Corpus linguistics is empirical, that the examination focuses on natural data of language (Biber, 2015; McEnery & Gabrielatos, 2006, p.35)

2. Modern corpus studies utilize computers and computer software for storing and analyzing language data (Biber, 2015; McEnery & Hardie, 2012).

3. The analysis both quantitative and qualitative (Biber 2015), although quantitative analysis tends to dominate the literature and studies of corpus linguistics (McEnery & Gabrielatos, 2006).

To conclude, Corpus linguistics is a broader concept that can be applied to many aspects of linguistic inquiry. Corpus linguistics can be seen as a method and procedure that deals with empirical data in linguistics.

2. Definition and Use of Corpus

According to Sinclair 1991; Stubbs 1996; Biber et al. 1998; Hunston 2002 cited in Lynne Flowerdew (2012:03) "*corpus as a collection of authentic language both written and spoken that has been collected for a particular purpose*". Corpus is a collection of texts, written or spoken, which is stored on a computer. Since corpus are stored on a computer, this allows for very large

amounts of text to be compiled and analyzed using special software. We can look at a language feature in a corpus in different ways. For example, using a corpus of academic text, we could examine how many times the words "credit" and "items" occur. This will give us quantitative results.

Corpus is useful for linguists since they are useful resources for researches (Herdian, 2017). For example, Meyer (2004) did research in lexicography. He shows that lexicographers can effectively make dictionaries by studying word usage in a very large linguistic corpus. It implies corpus provides the example of usage of words or phrases from many millions of words of a text. Also, McEnery and Wilson (2001: 107) (cited in Herdina 2017) said "*corpus can help to know how frequently the coursebook co-occurs and how many words provided in the coursebook*". They also mention that "*corpus being a source of 'natural' data; it is useful in defining evidently which forms are most frequently used in what aspect*". So, using corpus, provides frequency which easy for us to understand the variability of word usage based on textual information.

H. Word lists (Word Frequency Counts)

"*Word lists are alphabetical lists of all words in a given corpus, specifying their frequency of occurrence and or percentage towards the total number of words in that corpus*" (Simbuka,2019). "*Another common corpus technique which software can perform is the extremely rapid calculation of word frequency list for any batch of text*" (Mahmudi, 2019). By running a word frequency list into a corpus tool, we can get the rank ordering of all the words in it in order of

frequency. Frequency is one of the most important characteristics of vocabulary, it affecting most or all aspects of lexical processing and acquisition. Frequency refers to the number of times something occurs in a corpus (or text). Therefore, corpus data is the best source of frequency information.

I. Previous Studies

Revealing the vocabulary profile of English textbooks used in ELT had been conducted by many researchers. Putri (2016) investigated the vocabulary profile of 8-grade English textbook used in Anak Terang Junior High School, this study was to show the result vocabulary profile of Junior High School English textbook; the title is English in Mind for grade 8 that was published in 2010 by Cambridge University Press. From the overall result, it showed the proportions of the vocabulary frequency classifications. Depend on the overall result from all units of the textbook shows the percentage of K-1 words (1-1000) was 85.30%, K-2 words (1000-2000) was 7.19%, AWL words was 1.74%, and the percentage of Off-list (other vocabularies) words was 5.77%. Astika also (2016) analyzed vocabulary profile used in one series of English textbooks currently used in Indonesian Junior High School. The sample textbooks were: "When English Rings a Bell" for grades VII, VIII, and "Think Globally Act Locally" for grade IX. The overall profile shows that the vocabulary coverage of the most frequently used words (GSL 1st and GSL2) was 92.65%, indicating that it is below the necessary level (95%) for easy comprehension. The AWL words in the textbooks were 1.72% or 920 words. The other vocabulary was 5.63%.

In senior high school, textbooks have been conducted by Iwan (2016). She investigated the vocabulary profile in the English textbook of the tenth grade used in SMKN 1 Salatiga. The findings of the textbook showed that K1 (known as the 1-1000 words) was 80.25%, K2 (known as the 1001-2000 words) was 7.77%, the AWL was 4.20%, and Off-list (known as Other vocabularies) words were 7.78%. She found that more than half part of the book belonged to K1 words.

Simbuka (2019) constructed the Technical Vocabulary of Islamic Religious Studies. The study is aimed to meet the need for first-year English language learners studying in Indonesian Islamic tertiary education. The IRSTV list contains selected word types extracted from five major sub-disciplines of Islamic Religious Studies (IRS), ie the science of Qur'an, the science of Hadiths, Islamic law and jurisprudence, Islamic philosophy, and theology, and Islamic mysticism theology taught in most Indonesian Islamic universities and colleges. Built upon the corpus of Islamic Religious Studies Textbooks (CIRSTIISI) that include 18,058-word types and 305,701 tokens, she found the IRSTV list contains 262-word types (or 239 lemmas) that are needed to be learned by English as Foreign Language (EFL) students of Indonesian Islamic universities, state institutes, and colleges. Comparing the study conducted by Simbuka, this study is quite different. The difference was in the sample. In Simbuka's study, the sample was from the five major sub-disciplines of Islamic Religious Studies (IRS), i.e. the science of the Qur'an, the science of Hadiths, Islamic law and jurisprudence, Islamic philosophy and theology, and Islamic mysticism theology. While this study used 3-coursebooks i.e. 'Economic English', 'Business English', and 'person to

person' which this kind of sample has never been analyzed by other researchers. Besides, Simbuka revealed 4 categories of vocabulary by Nation 2001, and more focused on constructing the "technical vocabulary". Whereas, this study only revealed 3 of 4 types of vocabulary suggested by Nation's classifications (2001) i.e. High-Frequency words, Academic Words, and Low-Frequency Words. In term of construct the Technical Vocabulary, she used another software called Antconc by Anthony (A freeware corpus analysis toolkit for concordancing and text analysis)

CHAPTER III

RESEARCH METHOD

This chapter of the present study contains a description of the elements of the method of the study. Since this research analyzed coursebooks, it does not need to provide research respondents.

A. Research Design

Describe 3 of 4 types of vocabulary based on Nation's classification, this study adopted a quantitative descriptive design. As cited in Simbuka (2019:73) in frequency ranking of word-types mostly using quantitative research design as defined by Creswell, (2007) and Malik & Hamied, (2014). Since it exposed the number of word-types in coursebooks, this quantitative research design was corpus as the only data and this design has been familiar around corpus approach studies (Baker et al., 2013; Gabrielatos & Baker, 2008). Furthermore, Herdian (2017:46) there are three essential characteristics of corpus-based studies. First, it uses a principled collection of naturally occurring texts. second, corpus-based studies use a computer to analyze. Third, corpus-based studies include both quantitative analyses and functional interpretation of language use (qualitative) (Conrad 1999). However, in this research, only the quantitative aspect was carried out by counting the number of word-types and the frequency at the target corpus. Therefore, the researcher decided to focus more on the "what" rather than the "why" of the research subject or word-types in the coursebooks. In other words,

this study would count and classify and build table models to show what was observed.

B. Research Participant

This research did not employ present a research participant, because the object of this study was English coursebooks.

C. Research Setting

This study was a text analysis research of English coursebooks, in this case, the researcher examined coursebooks used at the Faculty of Economics and Islamic Business, Faculty of Tarbiyah, Faculty of Ushuluddin, Faculty of Sharia, and Faculty of Economic and Islamic Business.

D. Data & Source of Data

This research used corpus as the only data because it aimed to look at the number of words in English coursebooks. The researcher had analyzed 3-coursebooks; 'Business English' and 'Economic English' books were used in the Faculty of Economics and Islamic Business and 'Person to Person' book used in 4-Faculty at IAIN Manado i.e. Faculty of Tarbiyah, Faculty of Ushuluddin, Faculty of Sharia and Faculty of Economic and Islamic Business. Those three coursebooks were:

1. Business English consists of 145-pages published by Tomsk Polytechnic University, 2008. There were 104 pages/ten chapters of this book were

selected as the accessible text data--the book used in the Faculty of Economics and Islamic Business i.e. the Islamic Economic Department and Islamic Banking Department for students in the third semester.

2. Economic English Instructional Material Based on Shariah Economy System consists of 166-pages includes 61-pages of the book's content. The rest of the books were the syllabus and lesson plans provided in the Indonesian language was organized in 75-pages and 30-pages were Glossary, Audio script, and Answer Key. The book used in the Faculty of Economics and Islamic Business that only used in the Islamic Economic Department for students in the third semester.

3. Person to Person Student Book 1: Communicative Speaking and Listening Skills, published by Oxford University Press, 2005. The book's content consisted of 97-pages from 124-pages of the total number of pages. The book is used in all of the 4-faculties i.e. Faculty of Tarbiyah, Faculty of Ushuluddin, Faculty of Sharia, and Faculty of Economic and Islamic Business. The book was used for all students in the first semester among others Akhwalusyaksiyah (AS) Department, Islamic Economic Law Department, Islamic Education Management Department, Islamic Economic Department, Syariah Banking Department, Al-Quran science and interpretation Department, Islamic Education in Children's Early Age Department and Arabic Education Department.

However, not all of the book's pages were used in this study. The unselected pages were publication information, forewords, references, glossaries, and

appendixes, syllabus and other pages that did not contain the main divisions of the books.

Based on the total number of all the books' (3 books) pages to be analyzed, there were 69,184 tokens and 6,182 word-types that build a corpus of English coursebooks used at the IAIN. These tokens and word types are available data of the Antwordprofiler program (see Figure 3.1. below) before it was sorted out to exclude non-content words from the total data. These word-types were considered by the AntWordProfiler program to be "valid words" according to the settings made in the "token definition" setting. The token definition tool of AntWordProfiler program was applied to specify what counts as "word" in a corpus study. This setting would explain more detail in the data analysis technique.

Figure 3.1. Word Profile of original result of English Coursebooks converted into Microsoft Excel

LEVEL	FILE	TOKEN	TOKEN%	CUMTOKE	TYPE	TYPE%	CUMTYPE
1	1_gsl_1st_1000.txt	54088	78.18	78.18	2131	34.47	34.47
2	2_gsl_2nd_1000.txt	4352	6.29	84.47	881	14.25	48.72
3	3_awl_570.txt	3895	5.63	90.1	806	13.04	61.76
0	-	6849	9.9	100	2364	38.24	100
TOTAL:	TOTAL	69,184			6182		

Figure 3.1 above showed the statistic of word profile converted into Microsoft Excel. In the first row represented 'level' means the categories of Vocabulary, i.e., level 1 was the GSL 1st 1000 (the list of words that have very high frequencies which cover about 77% running words in academic texts), followed by level 2 pairs with the GSL 2nd (the list of words that are only slightly more frequent than others not in the list which cover about 5% running words in academic texts). Level 3 was AWL (The list consists of 570 word families that are not in the most frequent 2,000 words of English but which occur reasonably frequently over a very wide range of academic text.). Level 0 (the list of words that did not exist both in the GSL and AWL). Then "token" was the total number of words that occurred in the coursebooks. Token% and Type% were the percentages of Vocabulary and cum token%, and cum types% represent the cumulative percentage of one category of Vocabulary. While types were the individual word. The last row was 'Total' showed the whole number of token and word-types. The numbers in each table would be explained in the findings and discussion section.

➤ **Unit of analysis**

The unit of analysis of this study was word-type as defined by Nation (2001). By using word-type as the unit of counting, it was important to define what count as a 'word' and what not count as a 'word' used in this particular study.

Here is what count as a word:

1. Any form of words including lemma which consists of a headword and some of its inflected and reduced forms were counted as individual word-types. For examples the word 'love', 'loves', 'loving' were counted as 3 word-types.

Here are what not count as a word:

1. The proper nouns such as; The names of person, the names of places, the names of the days of the week, the names of the months of the year and the names of traditional foods.

2. All of words from languages other than English such as Mandiri (Indonesian), Mudarabah (Arabic), Dottore (Italian).

3. Symbols like parentheses, quote markers, and bullet numbers. Note; the symbol of (-) that did not appear in between two words (refers to possessive words) or it stands by itself as a separator were not counted as word-types but rather was categorized as 'faults' data.

4. All of form of numbers, whether it was in the form of letters; one, two, three and so on or in the form of numbers; 1,2,3,4 and so forth. In this case the numbers such as page numbers, dates, amount of money,

5. number refers to o'clock, and all of the form of numbers were not counted.

Note; From all four points above by researcher had made them a separate table. The table was further elaborated in the Findings section.

E. Research Instrument

The research instrument is a corpus tool namely AntWordProfiler to analyze the vocabulary. This software is by Laurence Anthony. According to Simbuka (2018), the AntWordProfiler is a free application for conducting corpus linguistic analysis of profiling corpus contents, based on the classification of Nation; high-frequency words, academic words, technical words, and low-frequency words. This program used to examine the vocabulary profile by comparing every text in coursebooks with the 2000 most frequent word (GSL) and 570-word families that appear in the academic text list (AWL). GSL and AWL lists as a word list filtering tool to organize words that are included in the GSL and the AWL. The software is also able to categorize the words that did not contain in the GSL and the AWL which is categorized as "Group Not Found". This last category is actually words that are low in frequency (LFW and Technical words). The analysis will show statistical information such as the number and percentages of types and tokens of each group as shown in figure 3.2:

Figure 3.2. An example of statistical information by AntWordProfiler
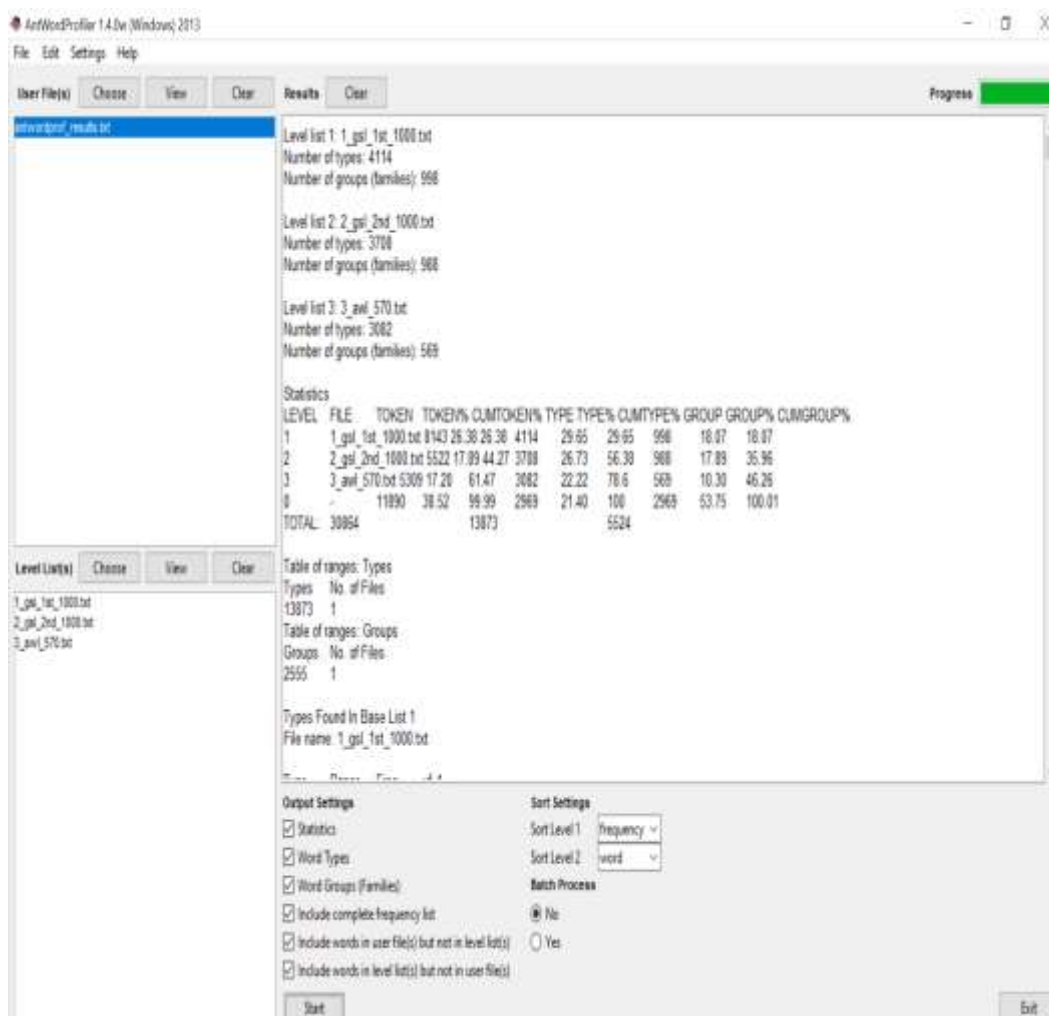

F. Data Collection Techniques

The data for this study is collected by selecting English coursebooks used in ELT for Non-English majors. Then they will be scanned and digitized the hard copy books using digital scanning devices in order to make conversion from hardcopy to electronic version. After the data has been scanned using text scanner

app (a tool android app), it is converted into txt file manually using tool name "notepad". The resulting files were plain text files, as shown by Figure 3.3:

Figure 3.3. An example of txt file converted from the pdf file of the data source.
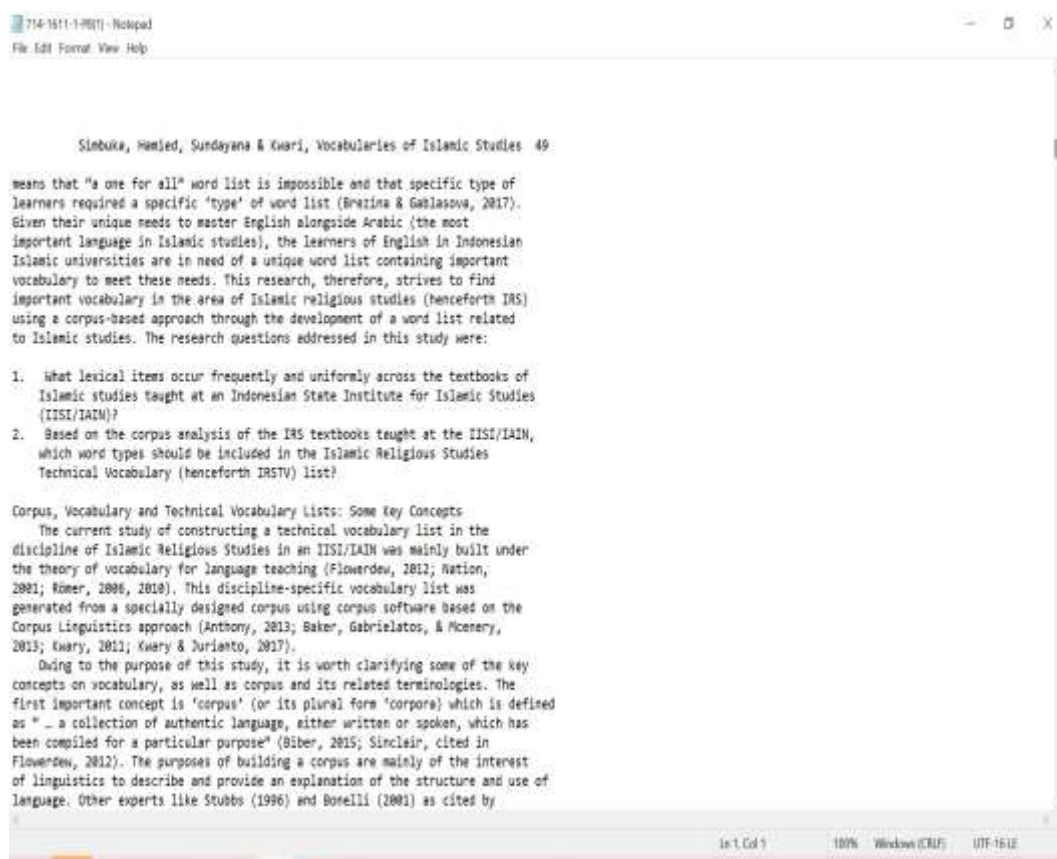

After converting the document into txt, the text is cleaned from typos and unnecessary information such as book covers, acknowledgments, publication information pages, page numbers, page titles, references, endnotes, indexes, and any of them which did not contain as "the body" or "the content" of the textbooks'. Then the data ready to analyze by the vocabulary profiler.

G. Data Analysis Techniques

There were several procedures in analyzing the data using AntwordProfiler as explained below.

✓ The first thing to do is starting with running the software, then the data files of the text of ELT coursebooks are uploaded into the software (on user's file(s) section).

Figure 3.4. An interface of AntWordProfiler
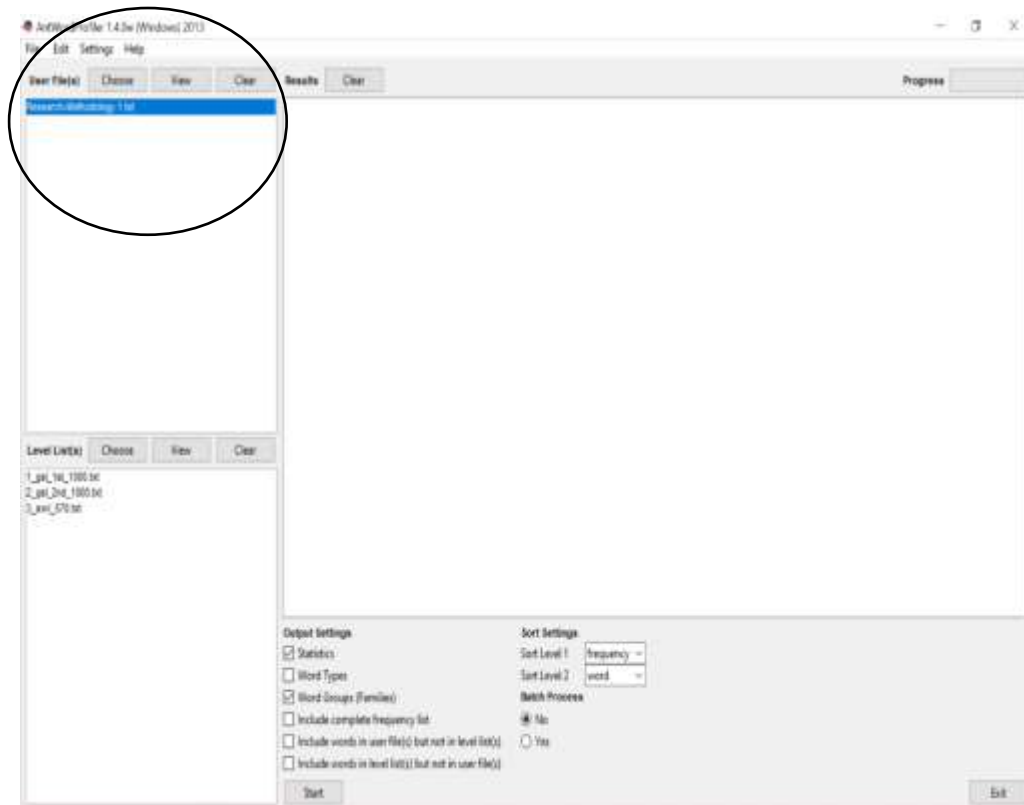

✓ After uploaded the files, click the settings menu → Global setting → Token definition, in order to input formula or other characters to define what count as a "word" for example the words "al-Qur'an" by the software was read as one word-type. The origin formula was "[a-zA-Z]+" (see figure

3.5.) then added two characters those were (' and -) so it could be like [a-zA-Z'-]+ (see figure 3.6.). This aim to showed a token that includes words/types containing apostrophe and hyphen character.

Figure 3.5. Setting up the Token definition
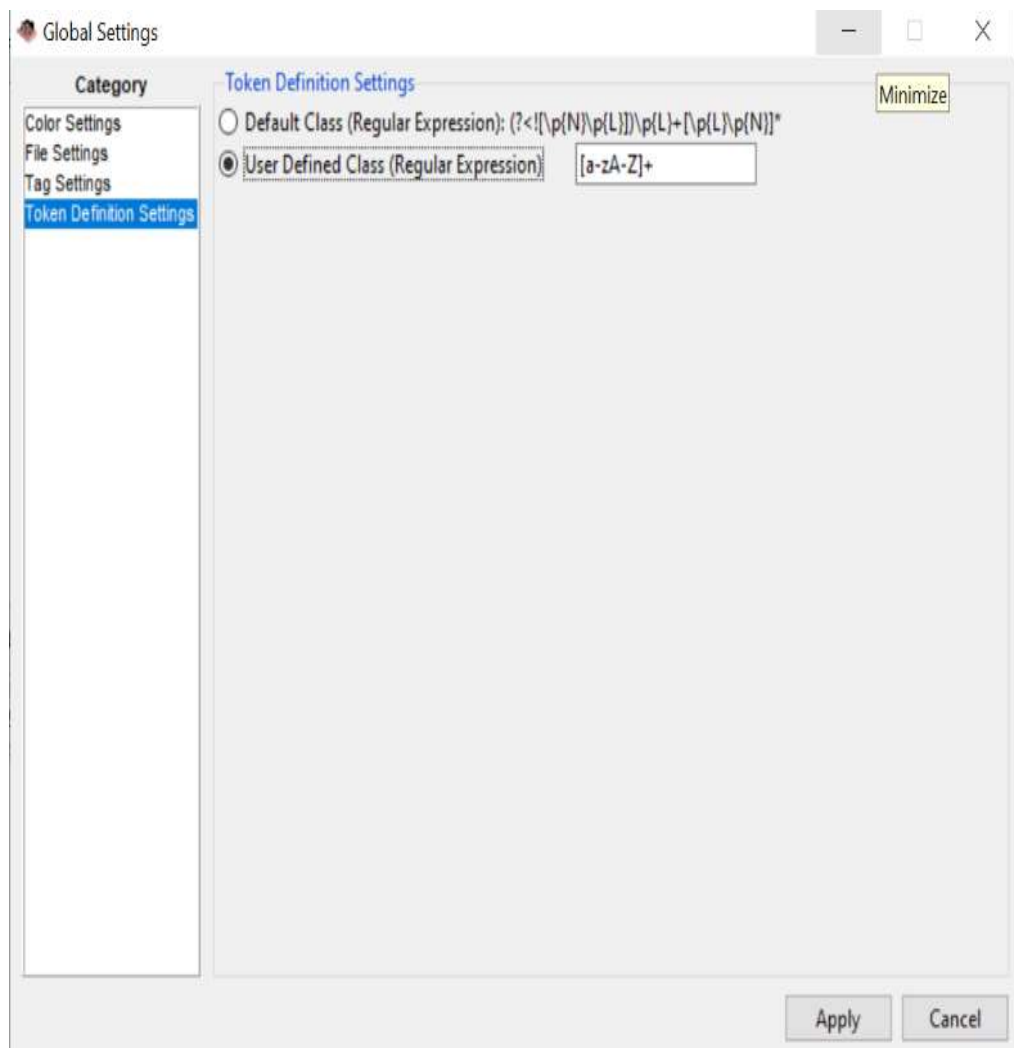

Figure 3.6. Setting up the 'Token definition' add the characters
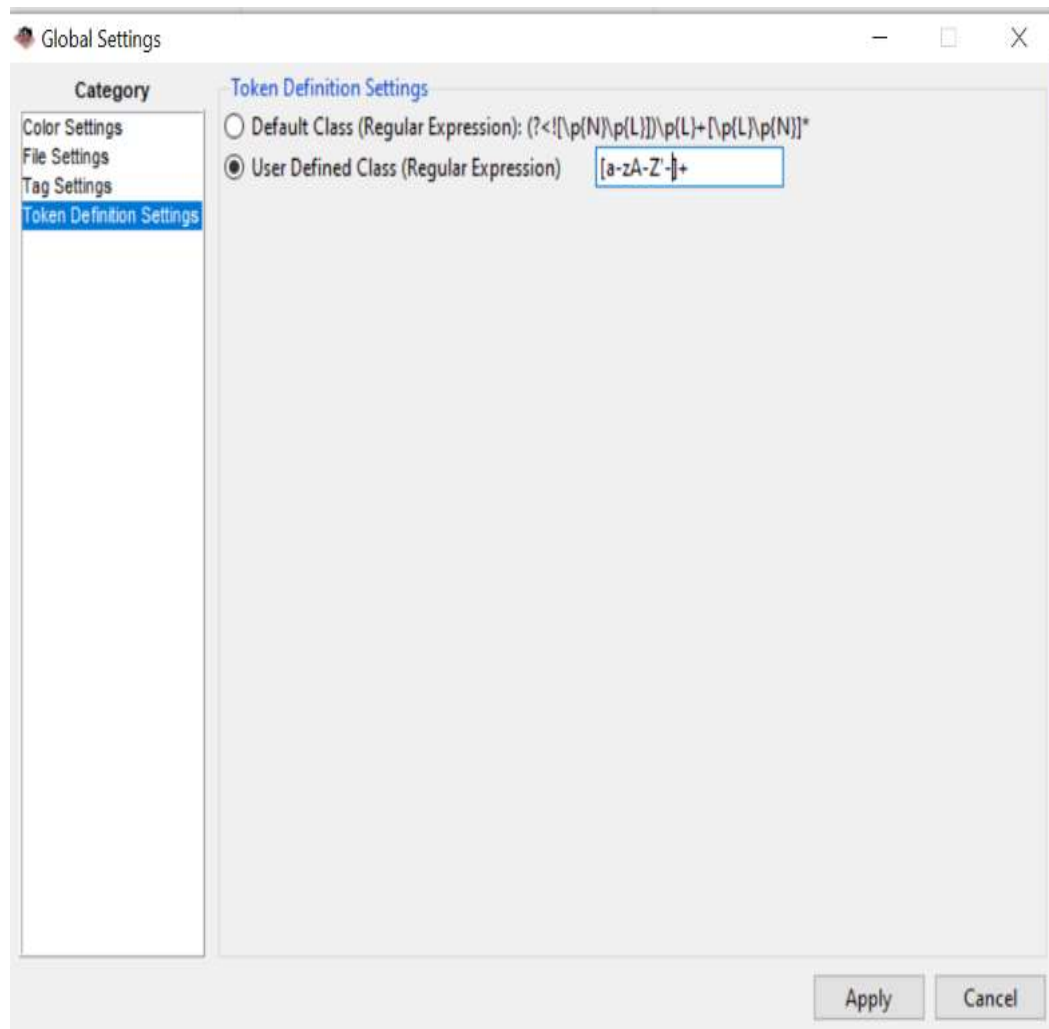

✓ In this software, the word list from the GSL and the AWL on the "level list"
is available by default as a word reference lists. These word lists serve as a
filtering tool for sorting words that are not included in the GSL and the AWL
as seen in Figure 3.7.

Figure 3.7. Level Lists in the AntWordProfiler
✓ The data sorting is going to analyze by hit the tab "start". Before hit the tab 'start', check (√) each box to generate a list of the statistics of the vocabulary category (see Figure 3.8). The result was shown on the right section. The result contains statistical information representing the word profile that include the number and percentages of types and tokens of each group that are GSL-first 1000 list, GSL second 1000 list, AWL list, and "other" word list. See Figure 3.9.

Figure 3.8. Checking (√) each box to generate a list of the statistics of the

vocabulary category
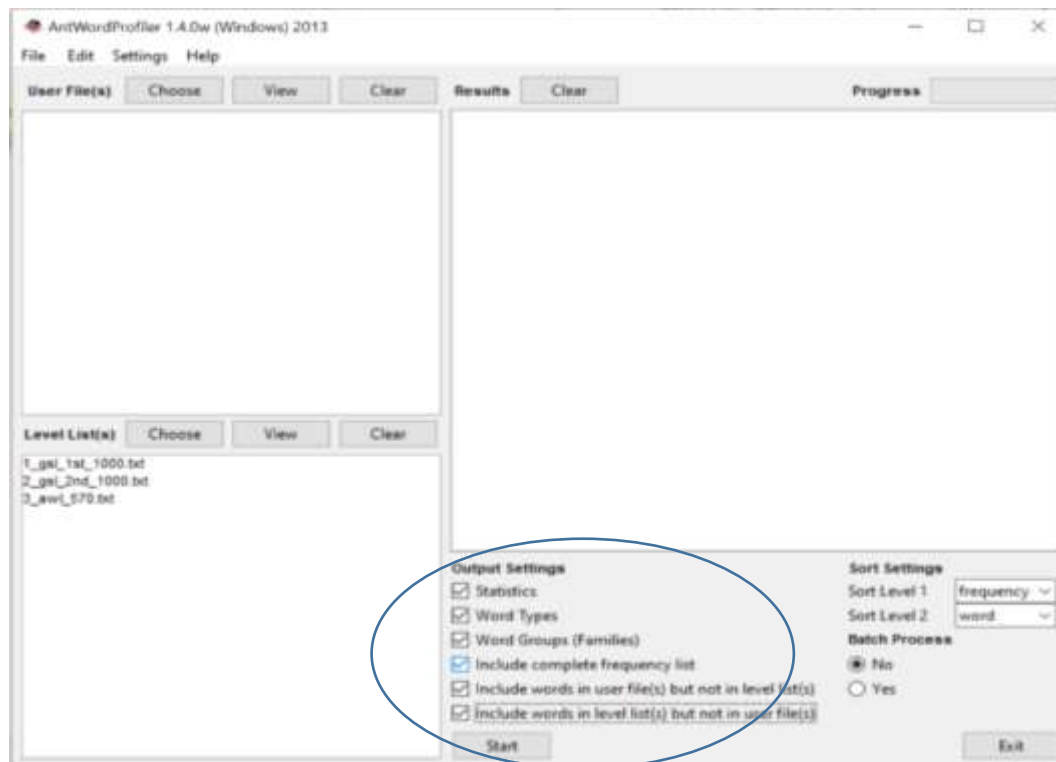

Figure 3.9. Result of the AntWordProfiler
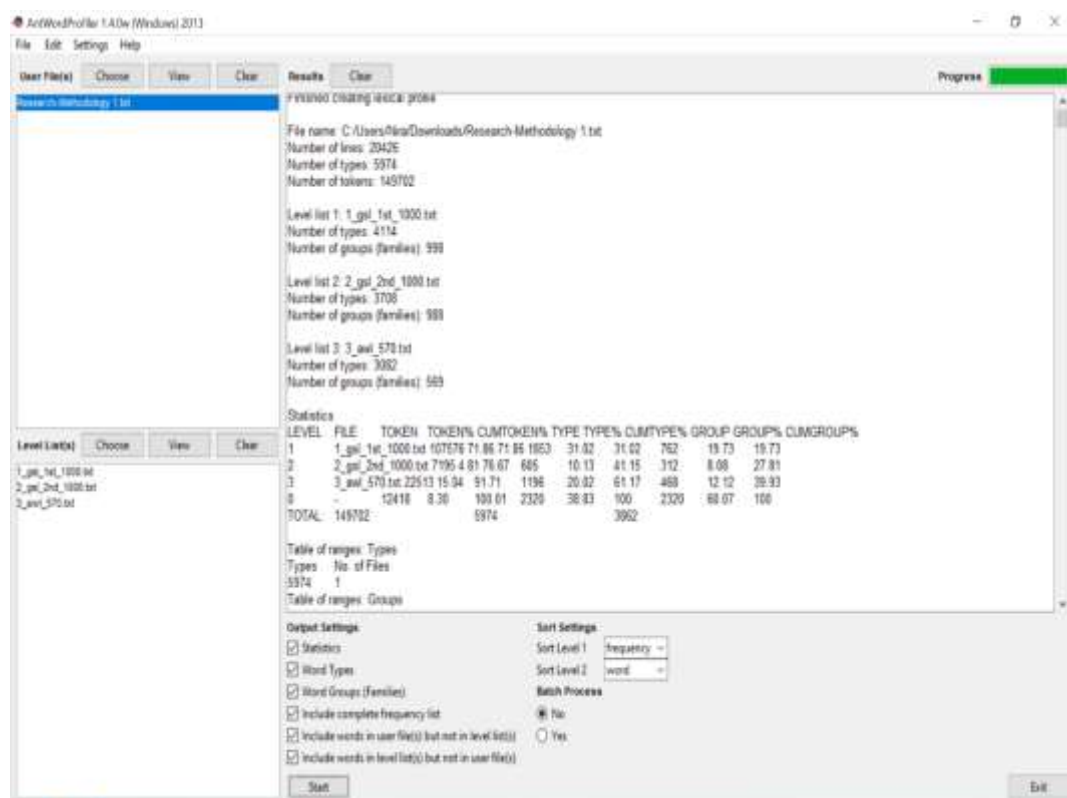

Figure 3.10. The view result of target corpus
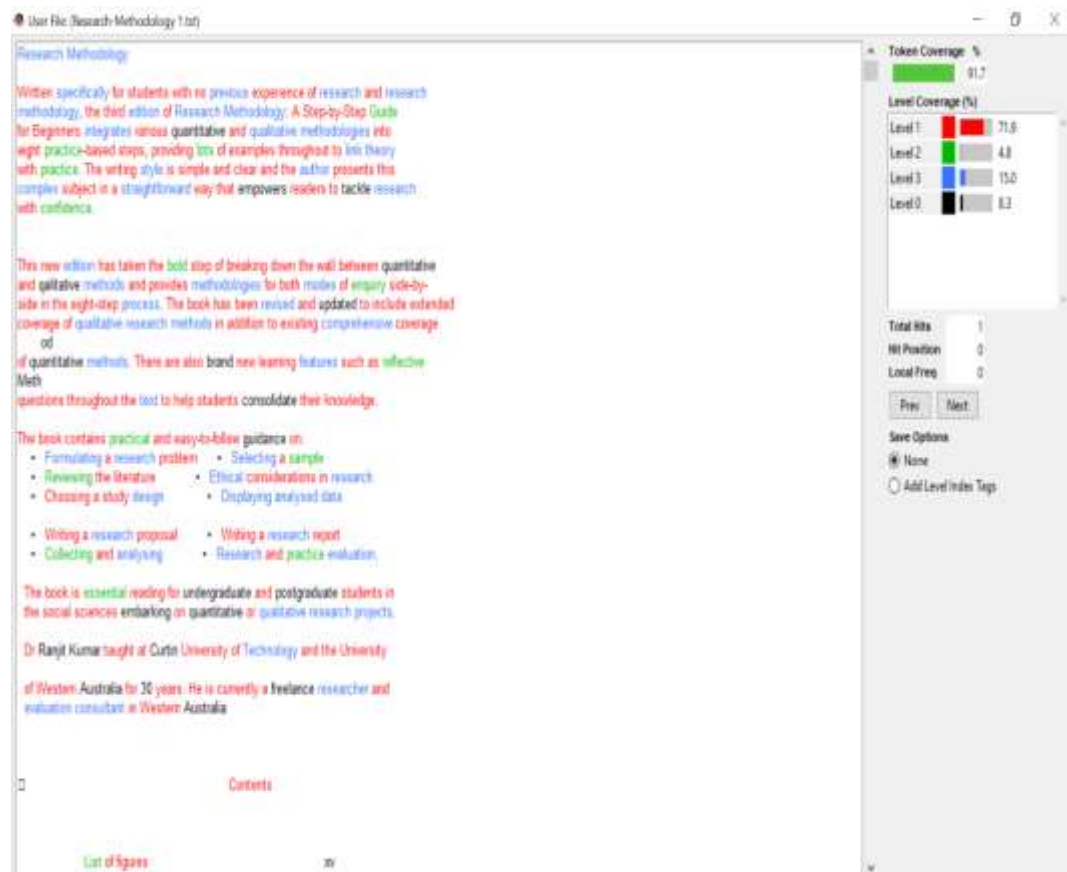

The procedure of using AntWordProfiler at this stage is complete. The result is saved into a notepad file in the form of txt/plain text (see Figure 3.11). The next researcher will discuss in detail in the findings and discussion chapter.

Figure 3.11. Result of the Antwordprofiler in txt file.

After done all of the steps, the target corpus was ready to be presented in the next section Findings and Discussion.

H. Research Procedures

To find the answer to research questions of this study, there were six phases:

1. Gathering the source data.

2. Converting the files into a TXT file

3. Carefully checking txt files by Microsoft Excel to make sure that all of the words in the coursebook are 100% cleaned (no typos and damaged words)

4. Separating the txt file to several Sub-corpus

5. Analyzing the corpus using Antwordprofiler programs

6. Describing the processed data of the coursebooks

CHAPTER IV

RESEARCH FINDINGS AND DISCUSSION

A. Introduction

This chapter presents the results and discussions to answer the two research questions; What are the word types of English Coursebooks and How many are the tokens.

B. The Word Profile of English Coursebooks

This section discussed the vocabulary profile of English coursebooks used in ELT for non-English majors at Manado State Islamic Institute. In terms of revealing the vocabulary covered in the coursebooks, it is necessary to investigate the number of tokens and word-types from each coursebook. Three books have analyzed using the Antwordprofiler tool. The Antwordprofiler corpus-software produces statistical vocabulary and frequency information concerning in the coursebooks. *The Antwordprofiler generates a word profile based on Nation's (2001; 2013) vocabulary classification of words into four categories Vocabulary; High-frequency words, Academic Words, Technical Words, and Low-frequency Words* (Simbuka, 2019:90). In other words, the software categorized GSL 1st and GSL 2nd 1000 as High-frequency words, AWL as Academic Words, and Groups not found as Low-frequency Words or Non-GSL and AWL or "other" word-types.

1. The results of the word profile in the English Coursebooks.

The results of the word profile covered in the 3 English coursebooks showed that there were 63,130 tokens from a total of all categories of Vocabulary, i.e., GSL 1st and 2nd 1000, AWL, and "Groups not Found" or all words that do not belong by both of the GSL and AWL. For the GSL 1st 1000, there were 51,092 tokens and 2,041 word-types. The GSL 2nd 1000 consisted of 4,310 tokens and 877 word-types. In this case, if both of them were combined, there were 55,402 tokens and 2,918 word-types that indicated as High-frequency Words. Meanwhile, the second category, Academic Words, exists in the data in 3,895 tokens and 806 word-types. The last category, 'Groups not Found' or 'level 0' by the Antwordprofiler program or Low-Frequency Words by Nation's category consisted of 3.833 tokens and 1,566 word-types. The following tables showed the result of the Word Profile

Table 4.1. Result of the Word Profile

LEVEL	FILE	TOKEN	TOKEN %	CUM TOKEN	TYPE	TYPE %	CUMTYPE %
1	1_gsl_1st_1000.txt	51,092	80.93	80.93	2,041	38.58	38.58
2	2_gsl_2nd_1000.txt	4,310	6.83	87.76	877	16.58	55.16

3	3_a wl_5 70.tx t	3,895	6.17	93.93	806	15.24	70.40
0	-	3.833	6.07	100	1,566	29.60	100
TOTAL		**63,130**			**5,290**		

Table 4.1 above showed the overall finding of 3 English coursebooks. Level means the categories of Vocabulary, i.e., level 1 was the GSL 1st 1000 (the list of words that have very high frequencies which cover about 77% running words in academic texts), then followed by level 2 pairs with the "GSL 2nd" (the list of words that are only slightly more frequent than others not in the list which cover about 5% running words in academic texts). Level 3 was AWL (the list of the word consists of 570-word families) that are not in the most frequent 2,000 words of English but which occur reasonably frequently over a very wide range of academic text). Level 0 (the list of words that did not exist both in the GSL and AWL). Then "token" was the total number of words that occurred in the coursebook's corpus. Token% and Type% were the percentages of Vocabulary and cum token%, and cum types% represent the cumulative percentage of one category of Vocabulary. While "types" were the word or is called the individual word.

2. **High frequency or the General Service List (GSL) vocabulary in the English Coursebooks.**

As mentioned above (see the results of word profile in the English coursebooks), the high-frequency words as shown in table 4.1. showed that the General Service List first 1000 or listed in the 'level 1' were 51,092 tokens, or the coverage was 80.93% of the total running words. Followed by the General Service List second 1000 were 4,310 tokens or 6.83% of the total running words.

In terms of Word-types, the corpus contained 2,918 word-types or 55.16% of the total word-types of the corpus that belonged to the GSL 1st, and 2nd 1000. The table 4.2. below showed the first 25 most frequent high-frequency words in the GSL 1st 1000 showed in Table 4.2. and GSL 2nd 1000 showed in Table 4.3. The completed word list was enlisted in Appendix 1 pages 66.

Table 4.2. The 25 most frequent words in the GSL 1st

Rank	Word-Types	Range	Frequency
1	The	3	3148
2	To	3	1988
3	A	3	1907
4	And	3	1519
5	Of	3	1495
6	You	3	1369
7	In	3	1352
8	Is	3	948
9	For	3	670
10	I	3	662
11	Your	3	656
12	Are	3	608
13	It	3	570
14	That	3	524

15	Or	3	523
16	Be	3	433
17	What	3	406
18	Have	3	404
19	With	3	393
20	On	3	386
21	Do	3	384
22	Can	3	353
23	Business	3	341
24	About	3	325
25	As	3	320

Note:

✓ Rank indicates the rank or position of word type in the list.

✓ Word-types indicates the kind of individual words

✓ The range indicates the number of sub-corpus that contained the word-type (Simbuka 2019:109). In other words, "range" shows a similar word-types existed in the 3 English coursebooks that were used as the data source. An example of similar word-types there is in table 4.2. the word "the" has 3 "range" means that from the 3 of the coursebooks contained the word "the," respectively.

✓ Frequency indicates the number of word-types that occurred in the target corpus.

Table 4.2. showed there were twenty-fourth functional words and one content word in the total 25 most frequent word types from all coursebooks. The types of words "the, to, a, and, of, you, and in" had frequency more than thousand

occurred in 3 sub-corpora. While the word 'business' occurred 341 times, the first rank was 'the' occurred 3,149 times in the three-coursebooks. The second rank was 'to' appeared 1988 times, followed by the word 'A' 1907 times. This rank presented most of them were functional words.

Table 4.3. The 25 most frequent Words in the GSL 2nd

Rank	Word-Types	Range	Frequency
1	Practice	3	126
2	Information	3	119
3	Conversation	3	89
4	Sentences	3	71
5	Correct	3	54
6	Customers	3	52
7	Customer	3	51
8	List	3	47
9	Lot	3	37
10	Check	3	32

20	International	3	16
21	Shop	3	15
22	Compare	3	14
23	Imagine	3	14
24	Lend	3	13
25	Arrange	3	12

Table 4.3. showed 25 most frequent Words in GSL 2nd 1000 list based on Range 3 and highest frequency. The first and the second rank have a frequency of more than one hundred i.e. the word 'Practice' occurred 126 times and 'information' occurred 119 times. The third rank was 'conversation' occurred 89 times and so on. The complete word list was enlisted in Appendix 1a pages 113.

3. The Academic Words List (AWL) in the 3 English Coursebooks.

Based on the data in Table 4.1. The Academic Words showed the coverage was 6.17% of tokens, or the total running words were 3,895. Word-types contained in the Academic Word List was 806 word-types or 15.24% of the total word-types. Some words below (Table 4.4.) are some of the Academic Word List. The complete word list has been put in Appendix 2 pages 133.

Table 4.4. The 21 most Frequent Words in the AWL

Rank	Word-Types	Range	Frequency
1	Partner	3	145
2	Credit	3	44

14	Goal	3	10
15	Achieve	3	9
16	Projects	3	9
17	Traditional	3	8
18	Category	3	6
19	Status	3	6

| 20 | Economics | 3 | 4 |
| 21 | Region | 3 | 4 |

Based on the data in Table 4.4, the first rank of the Academic Word list was the word 'partner' that occurred 145 times. The second rank was 'Credit' goes down that occurred 44 times. The sixth and seventh rank had the same frequency i.e. "Chart" (Frequency 22) and "Focus" (Frequency 22) followed by word-types "Create and Goal" (Frequency 10), "Achieve and Projects" (Frequency 9), "Category and Status" (Frequency 6), "Economic and Region" (Frequency 4).

4. Groups not Found (Non-GSL and AWL)

Groups not found were word-types that did not exist both in the GSL and AWL. These types are labeled as 'level 0' in the Antwordprofiler tool. This category showed the coverage was 6.07% of tokens, or the vocabulary size was 3,833. The Word-types size was 1,566 or 29.60% of the total percentage word-types; some words of this category shown in table 4.5 below. The complete word list has been put in Appendix 3 pages 154.

Table 4.5. Groups Not Found sorted by Range and Frequency

Rank	Word-Type	Range	Frequency			
			Total	Business English Book	Person to Person Book	Economic English Book
1	Interview	3	55	46	3	6
2	Cash	3	20	14	4	2
3	Career	3	17	10	6	1
1	Assets	2	69	16	0	53
2	Goods	2	46	34	0	12
3	I'm	2	42	0	41	1
4	Pronunciation	2	36	0	15	21
5	Don't	2	34	0	33	1
6	That's	2	21	0	17	4
7	Objectives	2	19	11	0	8
8	Transactions	2	16	2	0	14
9	Liability	2	15	13	0	2
10	Vocabulary	2	15	1	0	14
11	Resume	2	13	12	1	0
12	Video	2	13	2	11	0
13	Blanks	2	12	0	2	10
14	Deposits	2	12	11	0	1

15	Graduate	2	12	4	8	0
16	Transaction	2	12	2	0	10
17	Entrepreneur	2	11	5	0	6

Table 4.5. above showed that the word-types occurred in range 3 and range 2 (means that the word-types occurred in 3-investigated sub-corpora). In range 3 the first rank was the word 'interview' occurred 55 times from all of the books. Business English was 46 times, Person to Person was 3 times, and Economic English was 6 times. Then the second was 'cash' occurred 20 times. Business English was 14 times, Person to Person was 4 times, and Economic English was 2 times. The last was 'Career' occurred 17 times. Business English was 10 times, Person to Person was 6 times, and Economic English was 1 time. While in range 2 the first rank had a higher frequency than the first rank in range 3 that was 69 times. The word 'Assets' occurred 69 times from 2-sub-corpora. Business English was 16 times, and Economic English was 53 times. The word 'Assets' did not occur in the 'person to person' book as showed by the table above that indicates the number '0'. In terms of making a vocabulary list, both frequency and range must be considered. The range is measured by seeing how many different texts or sub-corpora each particular word occurs in. A word with a wide range occurs in many different texts or sub-corpora (Nation 2001:23). This means those the key information for vocabulary selection in the ELT textbook.

Note: Table 4.5 that indicate number "0" means there is no specific word-type occurred in the sub-corpora.

5. Comparison of the Coursebooks in terms of Vocabulary Coverage in each Vocabulary Category

This subsection is divided into a discussion on the vocabulary coverage of the English coursebooks in table form. The table indicated vocabulary category in each book i.e. GSL 1st and 2nd 1000, AWL, and Other vocabulary or 'Groups not Found' which served in percentage format both of percentage of total running words that belong to the coursebooks. The table described down below;

Table 4.6. Comparison Vocabulary Coverage of the Coursebooks

Course Books	Vocabulary Category			
	GSL 1st	GSL 2nd	AWL	Groups not Found
	Coverage%	Coverage%	Coverage%	Coverage%
Business English	81.48	5.59	5.83	7.10
Person to Person	76.70	8.30	2.78	12.22
Economic English	69.66	5.52	9.29	15.53

Table 4.6 showed the overall vocabulary category of 3 English coursebooks i.e. Business English, Person to person, and Economic English. In terms of

coverage, the highest percentage of tokens belonging to the GSL 1st 1000 was the 'Business English' book contained 81.48% coverage of tokens. Followed by the GSL 2nd 1000 was the book of 'Person to person' which covered about 8.30% coverage of total running words. The rest highest vocabulary category was owned by 'economic' book which has both of the Academic and 'Other vocabulary' percentage of token more highly than others books i.e. the AWL was 9.29% and the 'Other' was 15.53% coverage of tokens. However, in contrast, the 'Economic' book has the lowest percentage of tokens both of the GSL 1st 1000 (69.66%) and the GSL 2nd 1000 (5.52%). While 'person to person' book has the lowest coverage of the AWL (2.78%). Then the lowest category vocabulary belongs to 'other vocabulary' was 'business English' book covered about 7.10% coverage of tokens.

C. Discussion

1. High-frequency or the General Service List (GSL) vocabulary

High-frequency words are words that occur very frequently in all kinds of language uses (Sudarman, 2018:4). Those words are classified from the 2,000 most frequent word families in the General Service List (West & West, 1953). They cover approximately 80% of the running words in academic texts (Nation, 2001). These words are very important, Nation (2001) suggests that these words should be put on the first list of the target words in any kinds of the vocabulary development program.

The information about vocabulary knowledge becomes so important for the teacher (and students) as it provides empirical evidence for their consideration

about the suitability of the vocabulary level based on their needs (Herdian 2017).
In order to know the word profile of the target corpus, it is necessary to find out
the coverage. Coverage means the total number or percentage of tokens of one
vocabulary category (GSL, AWL, and Other word-types) in the target corpus. It is
important since it describes statistics of each category of vocabulary in the target
corpus.

The findings of the GSL 1st showed in table 4.2. and GSL 2nd in table 4.3.
For the GSL 1st in the table consisted most of them were functional words. As
stated by Nation (2001: 22) "*A General Service List of English Words, which
contains 2,000-word families. About 165-word families in this list are function
words*". There were 24 functional words (*the, to, a, and,* and *of* (see table 4.2) and
1 content word (*Business)* in the 25 most frequent words in GSL 1st. *"Although
functional words do not carry information, they contribute to meaning in some
ways. Moreover, they are important for understanding because they define the
relationship between two words"* (Herdian 2017:90). If students do not really
know the different meanings and use of functional words, it might lead to
misconceptions. So, by mastering functional words, students can understand the
word used in a sentence.

As cited in Simbuka (2019:114) "*GSL had been proofed to have the highest
proportion in text with a percentage ranging from 78.4% in a study of academic
text (Sutarsyah et al., 1994), 82.1% in Hwang's (1989 as cited in Nation &
Waring, 1997) study and reached 90.6% in a study by Hirsch (1992 as cited in
Nation and Waring, 1997)*". It implied that those statements had been confirmed

in this study by found the coverage of 87.76% of this category of vocabulary in the English coursebooks used in ELT for non-English majors. Based on this evidence, it could be said the proportion of GSL in the English coursebooks in this study was relatively normal in terms of the research on High-frequency words.

2. The Academic Word List

Academic words are the words that occur very frequently in academic texts but they are not from the list of 1,000 or 2,000 high-frequency words. Talking about the academic vocabulary content of the target corpus (3-English coursebooks) was referred to the coverage and the most frequent word-types that occurred in the data. The AWL coverage in this study was 6.17% which was below the current trend such as Coxhead's (2000 in Nation 2001:18) AWL used an academic corpus made up of the balance of science, arts, commerce, and law text totaling 3,500,000 running words that produced 10.0% coverage of academic vocabulary category. Besides, Valipouri and Nassaji (2013 as cited in Simbuka 2019:116) found their academic vocabulary coverage in their corpus of chemistry research articles was 9.96 %. These researches of the AWL coverage were higher than in this study of (3-English coursebooks). Basic ELT, GE, and middle school textbooks, on the other hand, contain little academic vocabulary, as they serve other purposes in language learning or these books tend to be written in a 'relatively reader-friendly way' and thus are not as scholarly as tertiary texts or research articles (Coxhead et al., 2010). However, it still confirmed the

"suggested" coverage as long as it is not as high as the General Service List (GSL).

3. Groups Not Found (Non-GSL and AWL)

Groups Not Found or non-GSL and AWL were those words that did not include in the frequency list (GSL & AWL) and may occur infrequently. The coverage of this vocabulary category was 6.07%. As cited by Simbuka (2019:119) this vocabulary category was used as the basis for selecting a technical vocabulary list. So, in this section, discussion on this vocabulary category word-types of the target corpus was limited. The researcher found in this vocabulary category contained words that do not indicate as content words. It might be considered as low-frequency words. Most of the Low-Frequency words were proper nouns as Nation (2001:19) stated "*many Low-Frequency words are proper nouns*". It included words from foreign languages and names for a particular person, place, or thing. Those words form separated into three parts or sub-categories in the form of the table, namely Proper Noun, Symbols, and other languages. The sub-category of Proper nouns consisted of 2000 tokens and 463 word-types. The word-types were the name of person, place, number, the names of the days of the week, and the names of the months of the year. Then the sub-category of Symbols consisted of 3,854 tokens and 365 word-types. IPA (International Phonetic Alphabet) Symbols, Numbers, Abbreviation, Exclamation Mark, Website Links, Faults, which caused by errors in the data conversion process were also included in this sub-category. The most common words in the term of 'Symbols' were IPA symbols which a certain symbol not recognized by the Antwordprofiler tool for

example/'bɔnd/, /ə' dʒʌst/, /ə' sain/, etc. So that only 2 or 3 letters can be recognized, e.g. /'Bɔnd/ the software recognizes only two words that were 'nd', 'st' from the word /ə' dʒʌst/ and to others. The last was "other languages" or another language that was not English, i.e., Mandiri (Indonesian), Mudarabah (Arabic), Dottore (Italian), and so on. This sub-category consisted of 194 tokens and 62 word-types. Those were in the form of tables presented in Appendix 4 page 220.

4. Discussion: Comparing Vocabulary Coverage based on Nation's classification of vocabulary.

Nation, (2015) stated that High-Frequency Words and Academic Words introduced by West (1953), and Coxhead (2000) respectively were important since it used as a basis for lexical studies (as cited in Gholaminejad, 2020). Based on the vocabulary category by Nation, it is ideal that High-Frequency Word has coverage of approximately 80% of tokens. In terms of the GSL 1st 1,000 covers about 77% and the GSL 2nd 1,000 about 5% of the running words in academic texts (Nation, 2001: 23). Seeing this, the book that comes closest to this type of category is the Business English book, namely the GSL 1st 1,000 was 81.48% and GSL 2nd 1,000 was 5.59% of the running words. In terms of Academic Word List (AWL) the vocabulary coverage suggested by Nation is 10% of tokens. The book that comes closest to this type of category is Economic English which has a coverage of 9.29% of tokens. The last one is 'other vocabulary' or 'group not found'. This vocabulary category might be 'Technical vocabulary' and 'Low-Frequency words'. As showed by Nation 2001:12, Technical words and Low-frequency words must have consisted of 5% of total running words respectively.

In this case, there was no the same coverage proposed by Nation 2001. However, Nation 2001 also stated that "*One person's technical vocabulary is another person's low-frequency word. This ancient vocabulary proverb makes the point that, beyond the high-frequency words of the language, people's vocabulary grows partly as a result of their jobs, interests, and specializations. The technical vocabulary of our personal interests is important to us. To others, however, it is not important and from their point of view is just a collection of low-frequency words*". To sum up, there was no book exactly the same as the coverage of all vocabulary categories suggested by Nation 2001. However, in terms of High-Frequency words, the researcher still recommends the 3 books because the coverage is close to 70-80% of tokens. And in terms of the AWL, the researcher suggested the "Economic English" since the coverage was close to the number of coverage suggested by Nation's 2001.

D. Pedagogical Implication

Knowledge of high-frequency words and Academic words is important in various spoken and written texts it can allow learners to recognize a large proportion of words. University students are mainly advised to master the words in West's General Service List (GSL) and Coxhead's Academic Word List (AWL) in order to be able to read their academic texts easily and effectively. Nation and Hwang (1995) present evidence that counting the 2,000 most frequent words of English as the high-frequency words is still the best decision for learners going on to academic study. Likewise, it is important to know the Academic Words list since it helps student in reading comprehension and to improving the

serious tone of the writing (Nation, 2015) as Nation (2001) stated that knowledge of academic vocabulary doubles the number of comprehensible texts for English for Academic Purposes (EAP) 2 learners. This knowledge is essential not only for developing academic reading comprehension but also for enjoying an effective and appropriate writing skill (Corson, 1997). In other words, knowledge of the GSL and the AWL makes it easier for the student to master reading and writing comprehension in academic text. While, for lectures/teachers, the benefit of introducing the vocabulary (the GSL and the AWL) to the student will make it easier for lecturers in the English language teaching system so that it will be more effective because it focuses on vocabulary that is considered important based on Nation's 2001. Finally, from the findings that had been found in the three sub-corpus (see 4.3.4.1 section), it can be concluded that the books used by the lecturers are suitable for students in learning English at Manado State Islamic Institute

CHAPTER V

CONCLUSION

A. Conclusion

The present corpus-based study discussed the vocabulary profile of English Coursebooks used in ELT for non-English majors at Manado State Islamic Institute. The study aimed to investigate the word types and tokens of each of the categories of vocabulary as stated by Nation (2001) contained in the investigated English Coursebooks.

The researcher found the result used a corpus tool namely Antwordprofiler programs. The program was created by Laurence Anthony based on Nation classification of Vocabulary. The findings had shown from all three coursebooks have a large number of tokens and types. The proportions of the vocabulary frequency classifications had an average of 63,130 tokens, and 5,290-word types (see the details in Table 4.1.). The percentage of the General Service List first 1000 was covered 80.93%, General Service List second 1000 was 6.83%. the cumulative percentage of the word coverage was 87.76%, which the coverage has met the standards of the HFW suggested by Nation 2001, as he said "*Frequency lists may disagree with each other about the frequency rank order of particular words but if the research is based on a well-designed corpus there is generally about 80% agreement about what particular words should be in the list of high-frequency words* ". In terms of the AWL, Nation 2001 suggests the proportion that should be in this vocabulary category is between 8.5% to 10%. From the results of

the 3 coursebooks in this study, the AWL coverage in this study was 6.17% which was below the current trend such as Coxhead's (2000 in Nation 2001: 18). However, it still confirmed the suggested coverage as long as it is not as high as the General Service List (GSL). The last category was 'Other vocabulary' or 'non-GSL and AWL' the coverage of this vocabulary category was 6.07%. This vocabulary category might be 'Technical vocabulary' or 'Low-Frequency words'. As showed by Nation 2001:12, Technical words and Low-frequency words must have consisted of 5% of total running words respectively. In this case, the coverage showed in 3-English coursebooks (Corpus) a little bit higher than suggested by Nation 2001.

By knowing the vocabulary profile of English coursebooks, the lecturers are hoped to more pay attention to the vocabulary content for each book that helps students' knowledge. Lecturers also can decide their choice of words in teaching the material, written or orally based on the vocabulary profile result of the book.

A. Suggestion

Based on the result of the research, the researcher would like to offer some suggestion to be considered as follow:

1. For lecturers

   For the lecturers, they have to choose course books wisely. The ELT materials contain in English course book should be suitable for students, the content of the course books not difficult but also not too easy. The research result gives information to the lecturers to consider several aspect

before they select a course book for students. The result gives a picture of vocabulary that is used in the course books, so that lecturers can choose English course books that suitable with students' need.

2. For the English Education Department

   To the English Education Department, this thesis could be guidance to the next research development.

3. For Other Researcher

   To the other researcher, the researcher suggests using this thesis as guidance to collect information to conduct another researcher especially in profiling vocabulary of English coursebooks.
